

5mm Round Standard T-1 3/4 With Flange Phototransistor Technical Data Sheet

Part No.: LL-503PTC2E-1AD

Features:

- \diamond 5mm round standard t-1 3/4 package.
- \diamond Fast response time.
- \diamond High photo sensitivity.
- ◇ Small junction capacitance.
- $\diamond~$ The product itself will remain within RoHS compliant Version.

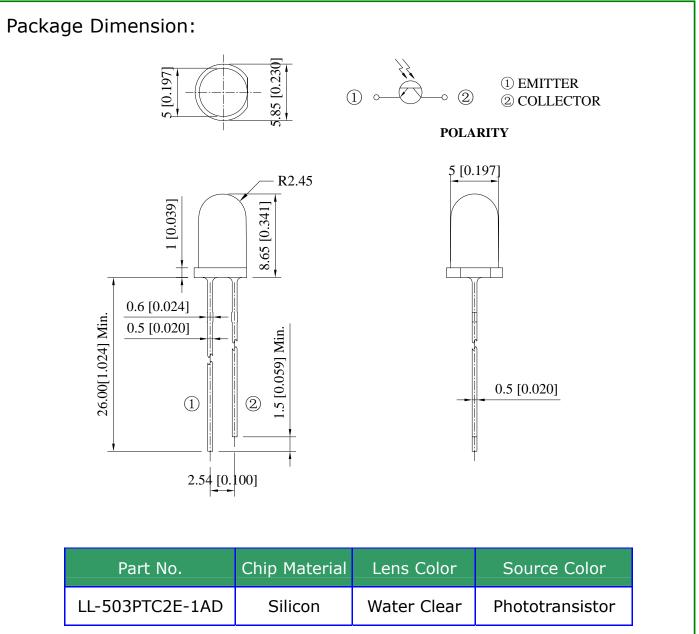

Descriptions:

- $\diamond~$ The 503PT is a high speed and high sensitive silicon NPN phototransistor in a standard $\Phi5$ package.
- \diamond Due to its clear epoxy, the device is matched to visible light and infrared radiation.

Applications:

- \diamond Infrared applied system.
- ◇ Optoelectronic automatic control system.
- \diamond Optoelectronic switch.
- ♦ Camera.
- ♦ Printer.
- \diamond Counters and sorters.
- \diamond Encoders.
- \diamond Floppy disk drive.
- $\diamond~$ Video camera, tape and card readers.
- \diamond Position sensors.

Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is \pm 0.25 mm (.010") unless otherwise specified
- 3. Protruded resin under flange is 1.00 mm (.039") max.
- 4. Specifications are subject to change without notice.

Please read the following notes before using the product:

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

2.1 Do not open moisture proof bag before the products are ready to use.

2.2 Before opening the package, the phototransistor should be kept at 30 $^\circ\!\!\mathbb{C}$ or less and 90% RH or less.

2.3 The phototransistor should be used within a year.

2.4 After opening the package, the phototransistor should be kept at $30\,^\circ\!\!\mathbb{C}$ or less and $70\,^\circ\!\!\mathbb{C}$ RH or less.

2.5 The phototransistor should be used within 168 hours (7 days) after opening the package.

3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 260° for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Repairing

Repair should not be done after the phototransistor had been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the phototransistor will or will not be damaged by repairing.

5. Caution in ESD

Static Electricity and surge damages the phototransistor. It is recommended to use a wrist band or anti-electrostatic glove when handling the phototransistor. All devices equipment and machinery must be properly grounded.
